200	Three Actions Before Solving	Author	Charlie Watson
		Date	15 Dec 2007
		CPM OS	03.01.3000.0240

Before starting any type of algebraic work in the Main application, there are three useful actions to begin with.

Starting in the Main application, the first action is to tap **Settings, Basic Format, Default, Set.**

The second is to tap **Edit, Clear All Variables.**

This ensures that any numerical values assigned to variables such as x, y, etc are cleared.

The third action is to tap **Edit, Clear All** so that you have a clear workspace to ready to begin.

This last step is optional, but will help you to exactly reproduce the screens seen in the movies in this series.
