

Before starting any type of algebraic work in the Main application, there are three useful actions to begin with.

Following these steps will ensure that the screens on your handheld ClassPad match the screens shown in these pdf's and videos, assuming your ClassPad is running the same operating system.

Starting in the Main application, the first action is to tap **Settings, Basic Format, Default.**

Change Number Format to **Number 2** and Angle to **Degrees.**

Finally, tap **Set.**

The second is to tap **Edit, Clear All Variables, OK.**

This ensures that any numerical values assigned to single letter variables such as x , y , X , Y , etc are cleared.

The third action is to tap **Edit, Clear All, OK** so that you have a clear workspace to ready to begin.

This last step is optional, but will help you to exactly reproduce the screens seen in these videos.
