

By default Classpad will label points, lines and other objects using the letters A, B, C, in alphabetical order.

It is a simple matter to change these to letters of your choice. In this example a triangle labelled ABC is modified to PQR.

Move to the measurement toolbar.

Draw a triangle in the Geometry application, tap onto the top vertex B.

Select the annotate tool from the left-hand end of the measurement toolbar.

Now use the abc tab from the keyboard to label the vertex as P and tap EXE.

Repeat for the other vertices.
